

Olist E-Commerce Performance Analysis

A comprehensive Power BI solution to analyze sales, customers, products, sellers, and operational efficiency

About Project

- The goal is to analyze the Olist Brazilian e-commerce dataset to understand key business performance areas including revenue, customer behavior, product trends, and seller contributions.
- The dashboard provides interactive insights into sales growth, category performance, customer retention, and delivery efficiency, enabling data-driven decision-making.

Business Objective

- Analyze revenue trends and business growth over time
- Identify top-performing product categories and subcategories
- Understand customer acquisition, retention, and segmentation
- Evaluate seller performance and contribution
- Analyze geographic demand vs supply distribution
- Monitor delivery performance and order cancellations

Dashboard Section Overview

-  Executive Dashboard - Provides a high-level summary of revenue, profit, orders, and category performance with trend analysis.
-  Demographic Analysis - Analyzes geographic distribution of customers and sellers, identifying demand-supply gaps across states.
-  Product Details - Explores category-wise performance, revenue contribution, and profit margins at subcategory level.
-  Customer Insights - Focuses on customer segmentation, retention rate, repeat purchases, and revenue contribution.
-  Seller Performance - Evaluates seller growth, revenue contribution, and distribution based on performance tiers.
